

*About MDS (Myelodysplastic Syndromes)*

MDS is not one specific disease — rather a group of diseases where the bone marrow fails to produce blood cells in the normal manner. MDS often progresses to acute myeloid leukemia (AML). MDS is the most common of all the hematologic malignancies and currently affects tens-of-thousands of people worldwide. The proceeds from this tournament will be donated to The Young Investigator's Grant Fund for Fellows in Hematology that will provide resources to further the research of MDS and hopefully, to one day find a cure.
